Ovibos  
moschatus  
Muskoxen have  
been introduced  
on at least one  
private ranch in  
Texas, well  
outside their  
natural range and  
in an unnatural  
habitat. We  
classify these  
animals only by  
the species,  
**muskox**, as it is  
not possible to  
determine the  
subspecies.
