

Maxwell Duiker

Duiquer de Maxwell (Sp),
Maxwellducker (G), Céphalophe de
Maxwell (F). Named after a Col.
Charles Maxwell.

DESCRIPTION Shoulder height
15-16 inches (38-40 cm). Weight
17-20 pounds (8-9 kg). The
Maxwell duiker is rather similar to
the blue duiker, but is about twice as
heavy, with a more uniform mouse-
gray color and somewhat larger
horns. The buttocks and legs are the
same color as the body, but the
underparts are paler. The forehead
is dark brown, contrasting with the
whitish streak that runs above the
eye from horn base to muzzle. The
bushy tail is colored like the body on
top and white underneath. The
head tuft is very short, or absent.
Like the blue duiker, the openings
of the facial glands are curved,
there are pedal glands between the
hoofs, but no inguinal (groin)
glands. Both sexes grow horns
except in the subspecies *liberianus*
(Liberia), where the female is hornless.

SCI Record Book of Trophy Animals and the
SCI Trophy Records Committee proudly presents
this certificate to:

Mechislav Klímovich

for taking a Maxwell Duiker

with a Rifle measuring 6 12/16

On a hunt in Ghana on 02/23/2012

Measured by Mechislav Klimovich on 02/23/2012.

Your entry currently ranks **Number 10**, a Silver Medal trophy
